

REMOTE CONTROLLER OPTION (BX)

When having our Programmable Digital Controller on the face of our Air Conditioner does not fit your application, Thermal Edge offers the Remote Controller Option.

HOW IT WORKS

This option moves the controller into your enclosure using a 10' cable. A Field installed, universal mounting bracket will also be provided for your location preference. The powder-coated universal mounting bracket is constructed of 16-gauge sheet metal and will provide limited access to the controller for secure applications. As shown below*, the air conditioner has no openings on the face of the unit. In addition, the Remote Controller Option and a filter hood or louvered cover option are required for high pressure wash-down applications.

**Unit pictured left is a UL Type 4X Air Conditioner with the remote controller option. Drawing to the right illustrates the application and installation of the remote controller option.*
