

# Thermal Edge Inc.™

## Air Conditioner Accessories

# DIAGNOSTICS (X1)

Compatible with Thermal Edge **Redundant Systems** (E5, E6, E7, E8)

The HMI provides remote access via a web-based portal which displays how the system should be operating based on what the PLR is calling for. End-users may configure five (5) settings through this portal including the cycle time of both air conditioners, the auxiliary compressor status and enable time, and if installed with the Option K4 – Open Door Kill Switch, the open door delay time prior to the system powering off.

When combined with the E8 Secondary Unit Backup with PLR, end users get a failsafe system with full system visibility for both the primary and secondary system.
