

Environmental Sustainability

Environmental responsibility is an integral part of how we design, manufacture, and support our products. We understand the environmental risks associated with refrigerants and strictly adhere to all applicable regulations and industry best practices for handling, recovery, reclamation, and disposal by licensed personnel under the Environmental Protection Agency (EPA) certification program. This ensures that only certified procedures and approved recovery methods are used to properly contain refrigerants and never released into the environment.

Our commitment extends beyond manufacturing. Through our structured Return Material Authorization (RMA) program, we prioritize responsible material management, repair, and refurbishment whenever possible. By extending product life cycles and ensuring proper refrigerant recovery during service and returns, we actively reduce environmental impact while maintaining the highest standards of product performance and compliance.

Environmental sustainability is not an afterthought, it is embedded in our operational practices, regulatory compliance, and product lifecycle stewardship.
